fpow

Return a value raised to an exponent

Description

```
Float:fpow( Float:value, Float:exponent )
```

Raise `value` to `exponent`

Parameters

`value`	input value
`exponent`	exponent

Return value

Returns (value)$^{(exponent)}$

Example usage

```
new Float:x;

x = fpow( 3, 4 );   // 81

x = fpow( 7.39, E ); // 2.0001.. (=natural logarithm)
```
