

memcpy

Copy byte buffer

Description

```
memcpy( dest[], source[], index, length )
```

Copy the source string to dest, starting at the index byte in dest, and counting length bytes.

Parameters

dest	destination buffer
source	string to be copied
index	offset in source
length	number of bytes to copy

Return value

Returns number of bytes copied.

Example usage

```
new s1{20};  
new s2{20};  
  
strcpy(s1, "ABCdef");  
memcpy(s2, s1, 3, 3);  
  
// s2 now contains "def" - NOTE that no terminating NULL character is  
copied
```
