

## strmid

Copy a subsection of a string

### Description

```
strmid( dest[], const source[], start=0, end=cellmax, maxlenlength=sizeof dest )
```

Copy a subset of characters from source into dest.

### Parameters

dest	The buffer for the result
source	The string that we will extract data from
start	The location in source where we start extracting data from
end	The location in source where we will stop copying.
maxlength (optional)	The size in cells of the dest buffer

### Return value

The number of characters copied into dest.

### Example usage

```
new s{20};  
new b{20} = "CatDogAnt";  
  
strmid(s, b, 3, 6); // returns 3  
  
// s now contains "Dog"
```
